

# Simple Responsive Navigation Menu – User Guide

## 1. Introduction

This navigation menu is designed to work on all screen sizes, from smartphones to desktops. It automatically adapts its layout depending on the screen width. No technical knowledge is required to use this template.

## 2. Opening the Menu

Simply open the **index.html** file in any modern web browser. The menu will display automatically at the top of the page.

## 3. Understanding the Layout

- On mobile devices, the menu items are stacked vertically.
- On tablets and desktops, the menu is displayed horizontally.

This behavior is automatic.

## 4. Changing Menu Links

To change menu text or destinations:

1. Open index.html
2. Locate the navigation section:
3. `<ul class="nav-list">`
4. Replace the text or URLs inside the `<a>` tags.

Example:

```
<a href="Projets.html">Projets</a>
```

## 5. Changing Colors and Style

All visual styles are controlled from the **style.css** file.

You can easily change:

- Background color
- Text color
- Font size
- Spacing

No programming knowledge is required.

## 6. Responsive Behavior

The menu automatically adapts to:

- Smartphones
- Tablets
- Desktop screens

No manual configuration is needed.

## 7. FAQ

**Q: Does this menu require JavaScript?**

A: No, it is built using pure HTML and CSS.

**Q: Can I use it in a commercial project?**

A: Yes, according to the Envato license.
